

ROTARY PACKAGE PASSER

PART#: ROTARY_PACKAGE_PASSER

PRODUCT LINE: ACCESSORIES

DESCRIPTION

The rotary package passer consists of an outer shell of stainless steel sides, UHMW plastic top and base with openings facing the customer and employee. An inner revolving unit built from the same material as exterior plus a clear vision window has an opening to one side only, allowing packages to be passed through a barrier between customer and employee without a breach of security. This package passing option is designed for ease of use, and is a cost effective means of passing small to medium size packages on a frequent basis with little or no maintenance required.
