

SECURE SOUND TRANSACTION LINE SYSTEM

PART#: TLS_SECURE_SOUND

PRODUCT LINE: WINDOWS

DESCRIPTION

The TSS Secure Sound System allows for a continuous seamless look and maximum protection. Using a cutout in the glazing wall section, a backer "secure sound" window is attached and spaced 1½" from the main glazing wall section. This allows for sound to travel through the system while also removing any shooting lane. These systems are great for banks, reception areas, and service counters.

OPTIONS

- Available in Acrylic, Polycarbonate, and GCP
- Intended for Interior Purposes
