

The Healing Center of San Diego, a pain management facility, needed a bulletproof barrier system implemented in a short time frame. The barrier and surrounding materials had to achieve four main objectives:

- Provide a high-end, professional setting for patients that fit the upscale neighborhood and medical complex
- Enable better access control for the facility
- Improve visibility for employees to ensure their safety
- Meet ballistic security requirements from the local Sheriff

The design had to reflect a light airy feel without sacrificing security, which posed quite a challenge because of the limited space. Total Security Solutions (TSS) worked with Element Construction to design and implement a system that achieved all of these goals. Most importantly, TSS installed multiple access control points that linked the showroom, the administrative area, and the lobby, as well as supplied ballistic fiberglass to Element Construction for the storefront walls. The project, which was completed in just three weeks, utilized UL-rated Level 1 acrylic glass and a UL-rated Level 3 Aluminum ballistic framing system.

PROJECT LOCATION

City: San Diego
State: California

PRODUCTS USED:

UL-rated Level 1 Acrylic Security Glass
UL-rated Level 3 Aluminum Ballistic Framing System
